EXECUTIVE MANAGEMENT DECISION BRIEF

- **Ingestion & Data Quality Profile:** Audited 500 source rows across 7 columns with 100.0% full record completeness. Detected 0 duplicate records in source data.
- **Total Records Volume Benchmark:** Total Records Volume stands at 500 calculated via COUNTROWS. Supporting benchmark Mean Units_Produced stands at 1,699.50.
- **Cohort Concentration (Production Line):** Largest volume resides in 'Injection Molding' with 1,70,950 (20.1% of cohort total). Lead cohort exceeds 'CNC Milling Hub' by 1.0x.
- **Temporal Trajectory (Month):** Measured from 2024-01-01 (66,808) to 2024-12-01 (71,029) with +6.3% net trajectory. Peak volume recorded in 2024-09-01 (73,692).

METHODOLOGY, AUDIT TRAIL & METRIC DICTIONARY

METHODOLOGICAL POLICIES & AGGREGATION AUDIT TRAIL

Policy #1: All analytical aggregations are computed locally in-browser using full-precision raw IEEE 754 float values.

Policy #2: No intermediate rounded values are ever re-aggregated across groups, metrics, or export layers.

Policy #3: Non-additive metrics (ratings, GPA, percentages, unit prices) are aggregated via weighted or arithmetic mean/median only; summation is strictly forbidden.

Policy #4: Semi-additive metrics (stock on hand, account balances) are point-in-time state indicators and must not be aggregated over time dimensions.

Policy #5: Missing, null, or empty string values are excluded on a per-metric basis without corrupting adjacent columns.

Policy #6: Zero AI hallucination guarantee: 100% deterministic code compilation with verified three-way engine parity.
