EXECUTIVE MANAGEMENT DECISION BRIEF

- **Ingestion & Data Quality Profile:** Audited 6,000 source rows across 22 columns with 100.0% full record completeness. Detected 0 duplicate records in source data.
- **Total Net Sales Benchmark:** Total Net Sales stands at ¹339.83M calculated via SUM(Net_Sales_INR).
- **Cohort Concentration (Customer Segment):** Largest segment resides in 'SMB' with 11,70,90,203.09 (34.5% of cohort total). Lead cohort exceeds 'Retail' by 1.1x.
- **Temporal Trajectory (Month):** Measured from 2025-01-01 (1,55,14,736.45) to 2026-09-01 (1,42,20,951.82) with -8.3% net trajectory. Peak volume recorded in 2026-02-01 (2,09,06,756.91).

METHODOLOGY, AUDIT TRAIL & METRIC DICTIONARY

METHODOLOGICAL POLICIES & AGGREGATION AUDIT TRAIL

Policy #1: All analytical aggregations are computed locally in-browser using full-precision raw IEEE 754 float values.

Policy #2: No intermediate rounded values are ever re-aggregated across groups, metrics, or export layers.

Policy #3: Non-additive metrics (ratings, GPA, percentages, unit prices) are aggregated via weighted or arithmetic mean/median only; summation is strictly forbidden.

Policy #4: Semi-additive metrics (stock on hand, account balances) are point-in-time state indicators and must not be aggregated over time dimensions.

Policy #5: Missing, null, or empty string values are excluded on a per-metric basis without corrupting adjacent columns.

Policy #6: Zero AI hallucination guarantee: 100% deterministic code compilation with verified three-way engine parity.
