EXECUTIVE MANAGEMENT DECISION BRIEF

- **Ingestion & Data Quality Profile:** Audited 25,000 source rows across 12 columns with 100.0% full record completeness. Detected 0 duplicate records in source data.
- **Total Gross Sales Benchmark:** Total Gross Sales stands at $89.39M calculated via SUM(Gross_Sales). Supporting benchmark Total Gross Profit stands at $19.85M.
- **Cohort Concentration (Product Category):** Largest cohort resides in 'Compute Hardware' with 1,83,78,500 (20.6% of cohort total). Lead cohort exceeds 'Cloud Infrastructure' by 1.1x.
- **Temporal Trajectory (Month):** Measured from 2024-01-01 (75,75,640) to 2024-12-01 (72,55,600) with -4.2% net trajectory. Peak volume recorded in 2024-03-01 (76,78,980).

METHODOLOGY, AUDIT TRAIL & METRIC DICTIONARY

METHODOLOGICAL POLICIES & AGGREGATION AUDIT TRAIL

Policy #1: All analytical aggregations are computed locally in-browser using full-precision raw IEEE 754 float values.

Policy #2: No intermediate rounded values are ever re-aggregated across groups, metrics, or export layers.

Policy #3: Non-additive metrics (ratings, GPA, percentages, unit prices) are aggregated via weighted or arithmetic mean/median only; summation is strictly forbidden.

Policy #4: Semi-additive metrics (stock on hand, account balances) are point-in-time state indicators and must not be aggregated over time dimensions.

Policy #5: Missing, null, or empty string values are excluded on a per-metric basis without corrupting adjacent columns.

Policy #6: Zero AI hallucination guarantee: 100% deterministic code compilation with verified three-way engine parity.
